**ENEN+ project and funds for mobility grants related to medical applications**

Dear all,

The EFOMP working team on the ENEN+ project would like to provide some information concerning the project that was launched by the European Nuclear Education Network (ENEN) Association. We would also to underline the benefits offered through this project to the Medical Physics Committee.

The main purposes of the ENEN+ project are the attraction of new talents to career in nuclear fields, their development beyond academic curricula and the increase of their retention in nuclear careers. Other purposes of this project are to involve the nuclear stakeholders within EU and beyond and in long-term to sustain the revived interest for nuclear careers.

This project focuses on four nuclear disciplines, which are nuclear reactor engineering and safety, waste management and geological disposal, radiation protection and medical applications.

EFOMP is one of the partners participating in this project and the discipline of interest for medical physicists is the **Medical Applications field**.

Through this project mobility grants are provided for learners, who desire to improve their skills and knowledge. The groups of scientists eligible for applying are BSc and MSc students, PhD and Post Docs scientists and Professionals interested in changing their careers to Medical Physics, or building up their lifelong learning on medical applications.

Therefore we would like to encourage Medical Physicists who are interested, to apply for the mobility grants in the Medical applications category.

For more information on the project you can visit the webpage <http://plus.enen.eu/>, while all the necessary information on the basic rules for applying can be found at the mobility manual: <http://plus.enen.eu/wp-content/uploads/2018/03/ENEN-PLUS-Mobility-Manual-v2-Feb-28-018.pdf>.

Applications are submitted through the following webpage: <https://plus.enen.eu/call-for-mobility-grants/>.

Kind regards,

Virginia Tsapaki  
Coordinator of the EFOMP working team  
ENEN+ project
