To: Efi Koutsouveli, Secretary General

Dear Mr Koutsouveli,

According to the legally fixed Statutes, EFOMP can consider only those issues and events that are related to the professional activities in medical physics, that is, EFOMP doesn't have the authority and rights to give any political assessments.

AMPR takes the same stand – to stay out of any political activities. One must mention that the leading international organizations such as WHO, IAEA, ICRP, UNSCEAR and etc., the activities of which are in the field of healthcare and radiation physics, follow the same approach.

AMPR strongly disagrees with the EFOMP's position to put up the AMPR's membership in EFOMP for discussion for political reasons. It should be noted that the initiator of this request is the delegation of Lithuania, the country with the highest level of Russophobia.

Under the given circumstances AMPR doesn't consider it appropriate to continue further cooperation with EFOMP as a politicized organization which violates its own Statutes.

With this in mind AMPR terminates its membership in EFOMP.

Narkevich Boris

President of the Association of medical physicists in Russia
